Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT   Producing recombinant polypeptides from duckweed plant culture, by
PT   transforming culture with nucleotide sequence coding for the
PT   polypeptide and signal peptide that directs polypeptide secretion into
PT   culture medium -
XX
PS   Claim 21; Page 45-46; 47pp; English.
XX
CC   The invention relates to a method for producing a biologically active
CC   recombinant polypeptide. The method comprises culturing a duckweed plant
CC   culture or duckweed nodule culture, which is stably transformed to
CC   express the polypeptide encoded by a nucleotide sequence that has been
CC   modified for enhanced expression in duckweed and collecting the
CC   polypeptide from duckweed plant or nodule culture. The method is useful
CC   for producing a biologically active recombinant polypeptide and for the
CC   directed secretion of the polypeptide from duckweed plant or nodule
CC   cultures. The polypeptides include a mammalian, therapeutic polypeptide
CC   such as insulin, interferons, monoclonal antibodies, cytokines, vaccines,
CC   in particular human alpha-2b-interferon or its biologically active
CC   variant. The duckweed frond culture or duckweed nodule culture expresses
CC   and assembles all of the subunits of a biologically active multimeric
CC   protein chosen from collagen, haemoglobin, P450 oxidase, and a monoclonal
CC   antibody, useful for industrial or chemical processes or for diagnostic,
CC   therapeutic or vaccination purposes. Nucleic acid encoding the
CC   recombinant polypeptides are useful for the expression and secretion of
CC   human alpha-2b-interferon in duckweed. The present sequence is human
CC   alpha-2b-interferon precursor protein.

PT Producing recombinant interferon tau analog proteins with improved
PT properties, useful for treating cancers, autoimmune diseases and viral
PT infections -
XX
PS Claim 6; Page 60-61; 70pp; English.
XX
CC The present sequence represents a human interferon alphaA polypeptide.
CC The specification describes a method of making recombinant interferon
CC (IFN)-tau proteins, which differ from wild-type IFN-tau by amino acid
CC substitutions near the amino terminus of the molecule. The mutated
CC IFN-tau proteins have improved biological activity, low toxicity,
CC retain the same or slightly reduced antiviral activity compared with
CC interferon alpha, and have enhanced antiproliferative activity compared
CC to wild-type IFN-tau. The method is used for producing IFN-tau proteins
CC with improved biological activities and properties. These IFN-tau may
CC be administered to treat cancers and decrease tumour growth, treat
CC viral diseases, treat autoimmune diseases and treat multiple sclerosis.
CC The cancer or tumour is selected from the group comprising human
CC adenocarcinoma, breast cancer, prostate cancer, glioblastomas, melanomas,
CC myelomas, lymphomas, leukaemia, lung cancer, skin cancer, bladder cancer,
CC kidney cancer, brain cancer, ovarian cancer, pancreatic cancer, uterine
CC cancer, bone cancer, colorectal cancer, cervical cancer and
CC neuroectodermal cancer, monoclonal gammapathies and cervical and oral
CC dysplasia. The autoimmune disease is selected from Type I diabetes
CC mellitus, rheumatoid arthritis, lupus erythematosus and/or psoriasis.
CC The viral infection is an RNA virus, a human immunodeficiency virus
CC (HIV) or hepatitis C virus.

PT Expression potentiators for protein synthesis regulatory genes -
PT medicines containing subtypes alpha2 and alpha8 of human interferon
PT alpha, for treating, ameliorating or preventing diseases of brain, nerves
PT and circulatory systems -
XX
PS Disclosure; Page 11; 24pp; Japanese.
XX
CC The invention relates to an expression potentiator for a protein
CC synthesis-regulatory gene containing subtypes alpha2 and alpha8 of human
CC interferon alpha as active ingredients. The expression potentiator is
CC for protein synthesis regulatory genes containing subtypes alpha2 and
CC alpha8 of human interferon alpha, and are useful for treating, preventing
CC or ameliorating diseases of brain, digestive, nervous and circulatory
CC systems, skin, hematopoietic tissues and muscles, virus infections,
CC arteritis, Acquired immune deficiency syndrome, allergy, and cancers.
CC Medicines containing the peptides are stable, easily handled, and
CC highly active. The present sequence represents a human interferon alpha
CC alpha 2 protein.

XX
PT   Hybrid of interferon and interleukin-1 for linked use
PT   non-immunogenic peptide - to treat e.g. viral infection
PT   or cancer, by fusing cell cytokine and IL-1 gene
XX
PS   Claim 1; Page 75-76; 92pp; English.
XX
CC   This polypeptide sequence comprises a fusion protein of
CC   human interferon-alpha (IFN-alpha) joined at its C-terminal end
CC   via a claimed linker peptide (see AAW18578) to the N-terminal end
CC   of human immunofobrin heavy chain gamma 1 (IC). It is prepared by
CC   PCR amplification (see AAW18581-21) of interferon alpha and IC
CC   sequences, construction of an expression vector, and expression in
CC   mammalian cells. The linker is a T cell immunologically inert
CC   peptide that serves to eliminate the non-antigenicity, protects
CC   the junction of the two polypeptide moieties. It also keeps
CC   coverage steric hindrance that the IC portion of the hybrid.
CC   hybrid has a much longer in vivo half-life than native IFN-
CC   alpha and will not penetrate membrane sites. It can be used
CC   treat hepatitis B + C, solid cell carcinoma, multiple myeloma
CC   or other cancers or viral diseases (claimed). It also serves as
CC   a model for the design and construction of other cytokine-IL-1
CC   hybrids.

ZMADH1FA
LOCUS       ZMADH1FA                5249 bp    DNA     linear   PLN 07-Aug-1995
DEFINITION  Maize alcohol dehydrogenase 1 gene (Adh1-F)
ACCESSION   X04049
VERSION     X04049.1  GI:22...
KEYWORDS    alcohol dehydrogenase.
SOURCE      Zea mays.
  ORGANISM  Zea mays
            Eukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta;
            Spermatophyta; Magnoliophyta; Liliopsida; Poales; Poaceae;
            clade; Panicoideae; Andropogoneae; Zea.
REFERENCE   1  (bases 1 to 5249)
  AUTHORS   Sachs,M.M., Freeling,M.S., Okimoto,R. and Borner,T.K.
  TITLE     Two alleles of maize alcohol dehydrogenase 1 have ... and
            poly(A) addition ...
  JOURNAL   Submitted (13-AUG-1987)
COMMENT     See X04048 for Adh1-S allele

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PS Example 6; Fig 6, 47pp, English.
XX
CC The invention relates to a recombinant viral nucleic acid comprising a
CC non-native 5'-untranslated (leader) sequence (S1) upstream of, and
CC operably linked to a second sequence (S2). S2 may be a non-native coding
CC sequence, encoding a product of interest. The presence of the non-native
CC 5'-untranslated leader sequence increases RNA or protein production from
CC S2 relative to the amount produced in the absence of S1. The invention
CC also encompasses a vector and isolated host cell comprising the
CC recombinant viral nucleic acid sequence, and a method of enhancing the
CC production of an RNA or protein in a host using the recombinant viral
CC nucleic acid. The recombinant viral nucleic acid is derived from a
CC plant virus (particularly an RNA plant virus), an animal virus or a
CC bacterial virus, and is used for enhancing the production of RNA or
CC protein (particularly a viral coat protein/non-native protein fusion) in
CC plant, animal or bacterial hosts. The recombinant viral nucleic acid is
CC useful for enhancing the production of RNAs and commercially useful
CC proteins or peptides such as enzymes, antibodies, hormones,
CC pharmaceuticals, vaccines, pigments, and anti-microbial polypeptides.
CC The present sequence represents a rice alpha-amylase signal
CC peptide-containing polypeptide encoded by a plasmid constructed
CC in an exemplification of the invention.

XX
PS   Example 4; Columns 51-54; 45pp; English.
XX
CC   The present sequence represents rice alpha-amylase. The nucleic
CC   acid sequence can be expressed in the plant viral constructs of the
CC   invention. The specification describes a recombinant plant viral
CC   nucleic acid derived from a positive (+)-sense RNA plant virus comprising
CC   a native (+)-sense RNA plant virus promoter that is linked to an
CC   expression sequence and a heterologous (+)-sense RNA plant virus
CC   promoter that is linked to an expression sequence. The promoters are
CC   incapable of recombination with each other, and one of the expression
CC   sequences encodes a plant viral coat protein while the other is
CC   optionally a heterologous coding sequence. The plant viral nucleic acid
CC   is capable of systemic infection in a host plant. The viral construct is
CC   useful for the introduction and expression of non viral foreign genes
CC   in plants and the production of e.g. potential AIDS therapeutic drugs.

PT Expressing mature, glycosylated proteins in monocotyledonous plant
PT cells - from chimeric gene including signal peptide sequence,
PT specifically therapeutic agents and industrial enzymes
XX
PS Claim 6; Page 27; 54pp; English.
XX
CC The present sequence represents the RAmy1A signal peptide sequence. It
CC is used in the course of the invention. The specification describes a
CC method for producing mature heterologous protein in monocotyledonous
CC plant cells. The method comprises transforming the cells with a chimeric
CC gene comprising a monocotyledon transcription regulator, inducible either
CC during seed maturation or by adding/removing a cell culture, DNA
CC encoding the heterologous protein, and DNA encoding a signal peptide,
CC with the signal peptide causing secretion of the protein from the cell.
CC Proteins expressed in this manner include mature glycosylated alpha
CC 1-antitrypsin (AAT) with a glycosylation pattern that significantly
CC increases its serum half-life, mature glycosylated antithrombin III
CC (ATIII), mature human serum albumin (HSA) having the native folding
CC pattern as shown by bilirubin-binding characteristics, or mature active
CC subtilisin BPN'. These proteins are useful therapeutically (e.g. AAT for
CC treating emphysema, ATIII as antithrombotic and HSA as blood replacement)
CC or as industrial enzymes (BPN' is used in detergents).

PT A gene expression system comprising the promoter region of
PT alpha-amylase gene, and a DNA sequence coding a desired protein
PT product in a plant cell
XX
PS Example 1; Page 27; 44pp; Japanese.
XX
CC The present invention describes a gene expression system comprising the
CC promoter region of an alpha amylase gene. Also described is a method for
CC preparing a transgenic rice plant comprising (1) introducing a DNA
CC into an immature embryo of a rice plant; (2) simultaneously culturing
CC the embryo with a suspended culture of a dicotyledon derived for
CC transformation step; (3) at which the transformed embryo is cultured in
CC selective medium containing plant growth hormones and (4) a callus is
CC the callus to roots and sprouts in a redifferentiation medium. The DNA is
CC be used for mass production of a desired protein in plant cells. The
CC cell. The present sequence represents the rice alpha Amy7 promoter
CC which is used in an example to illustrate the present invention.

PT   Improved method for integrating a DNA fragment into the genome of a
PT   monocot plant cell, useful for increasing the transformation efficiency
PT   of DNA transfer, involves pre-treating the cells in a medium containing
PT   plant phenolics -
XX
PS   Disclosure; Column 19-22; 13pp; English.
XX
CC   The present sequence is the coding region of the bar gene in the T-DNA
CC   vector pGVS71. The gene contains the adhI intron from maize. The vector
CC   was introduced into Agrobacterium tumefaciens in a method for integrating
CC   a DNA fragment into the genome of a cell of a monocotyledonous plant. The
CC   method comprises incubating, prior to contacting with the DNA fragment, a
CC   culture of untransformed [illegible] plant cells [illegible]
CC   containing a plant phenolic compound. The method is useful for improved
CC   Agrobacterium-mediated DNA transfer to plant cells (particularly [illegible]
CC   cells), or plant cell cultures (particularly of monocotyledonous plants)
CC   that have been pre-treated with plant phenolics. The plant phenolics
CC   stimulate cell division and enhance competence for integration of foreign
CC   DNA. The method provides a rapid, efficient and reproducible method for
CC   increasing the transformation efficiency of DNA transfer, particularly
CC   Agrobacterium-mediated DNA transfer.

XX
CC   This sequence shows the nucleotide sequence for the pPHI1406 vector
CC   pPHI1406. The plasmid contains a gene for the coat protein of MCMV (maize
CC   dwarf virus) coat protein expressed under control of the 35S promoter
CC   maize virus 35S promoters isolated from the MDMV strain. It also contains
CC   and a polyA signal sequence obtained from the potato proteinase
CC   inhibitor II (Pin II) gene that exhibits enhancer-like activity. The
CC   chimeric gene also includes a 5' UTR sequence which is a fragment
CC   region of tobacco mosaic virus that functions as a translation
CC   enhancer and a Zea mays alcohol dehydrogenase 1 intron 1 fragment
CC   spanning nucleotides 1266-2176 (SEQ ID NO:2) with Pin II 3' UTR
CC   which has been shown to function as an efficient 3' poly-adenylation
CC   sequence. The DNA is used for imparting resistance to MCMV
CC   viruses to which MCMV infection resistance provides
CC   cross-resistance, including maize dwarf mosaic virus strain A, or
CC   all of the three coat protein genes of MCMV can be used for
CC   protection of plants. MCMV has a single-stranded RNA
CC   (c.AA2745).

PT Novel polynucleotide encoding the rice 5-enolpyruvylshikimate phosphate
PT synthase, used to produce glyphosate tolerant or resistant plants
XX
PS Disclosure; Page 56; 85pp; English.
XX
CC The present invention relates to a glyphosate resistant rice
CC 5-enolpyruvylshikimate phosphate synthase (EPSPS) gene. This gene can
CC be used to produce plant tissue and/or morphologically normal fertile
CC whole plants which are tolerant or resistant to glyphosate herbicides,
CC and in the production of a herbicidal target for the high throughput
CC in vitro screening of potential herbicides.

XX
PS   Example 1; Page 28-29; 42pp; English.
XX
CC   The invention relates to an isolated DNA molecule comprising a
CC   promoter or intron 1 of the maize actin depolymerising factor (ADF)
CC   gene (Zmbap). The ADF promoter constitutes bases 1-734 of the ADF gene
CC   fragment given in AAH25974 and intron 1 constitutes bases 882-2101 of
CC   AAH25974. The invention also relates to recombinant constructs comprising
CC   the maize ADF promoter or intron 1 operably linked to a heterologous
CC   nucleic acid sequence; transgenic plants, seeds or grain comprising
CC   such a construct; and methods of producing such plants or their seeds.
CC   The promoter and the intron of the maize ADF are useful in controlling
CC   transgene expression in both plants, particularly monocotyledonous
CC   plants, and preferably transgenic maize plants. Constructs of the
CC   invention can be used to express a variety of heterologous genes,
CC   particularly those which confer tolerance to herbicides, insects or
CC   viruses, and those that provide improved nutritional value or processing
CC   characteristics. The present sequence represents a plant expression
CC   vector, pDAB305, which was used as the basis for the construction of
CC   vectors (AAH25975 AAH25978) comprising the maize ADF promoter and 5'UTR
CC   and/or maize ADF intron 1.

Prod. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

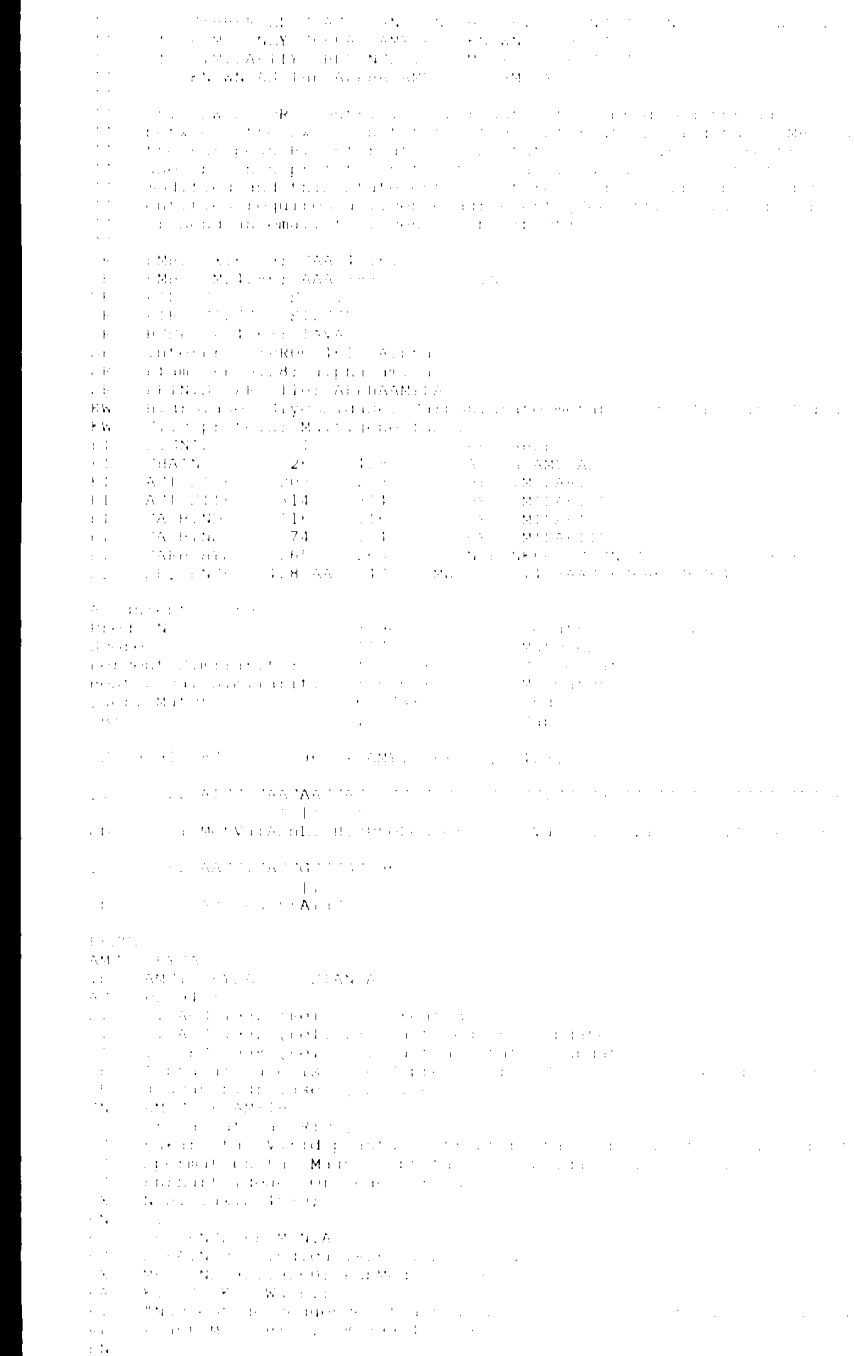
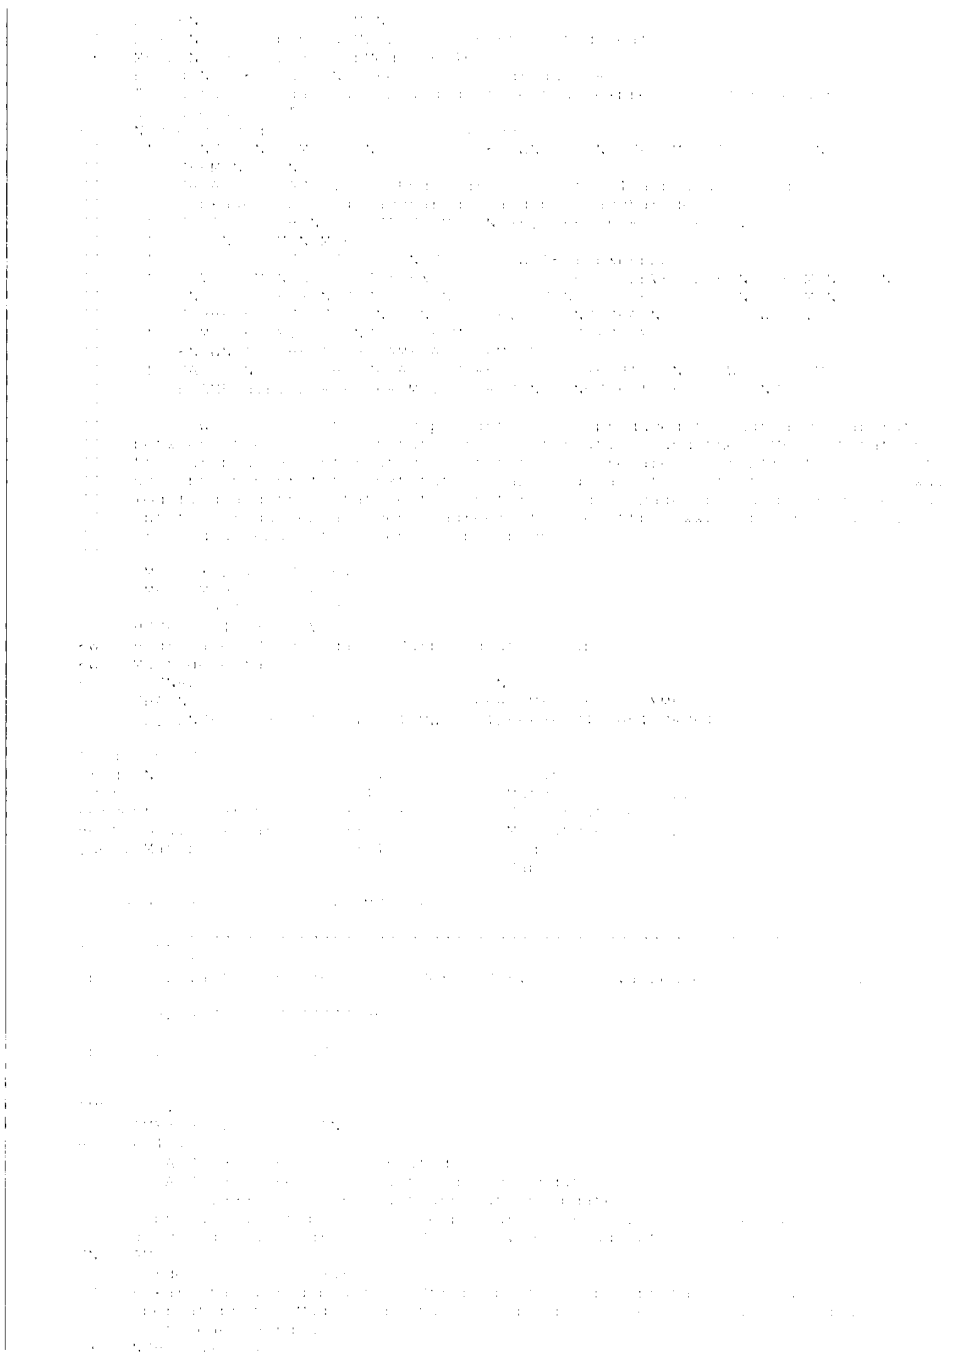
CC -!- FUNCTION: IMPORTANT FOR BREAKDOWN OF ENDOSPERM STARCH
CC DURING GERMINATION.
CC -!- CATALYTIC ACTIVITY: Hydrolysis of [illegible]
CC linkages in oligosaccharides, but not polysaccharides.
CC -!- COFACTOR: BINDS A CALCIUM ION, WHICH IS ESSENTIAL FOR
CC -!- SUBUNIT: MONOMER.
CC -!- TISSUE SPECIFICITY: MOST ABUNDANT IN GERMINATING
CC CALLUS, YOUNG LEAVES.
CC -!- DEVELOPMENTAL STAGE: EXPRESSED AT A HIGH LEVEL [illegible]
CC IN THE ALEURONE LAYER CELLS OF MATURE SEEDS OF THE PLANT





```
RN   [1]
RP   SEQUENCE FROM N.A.
RA   Chandler P.M., Zwar J.A., Jacobsen J.V., Higgins T.J.V., Inglis A.S.;
RT   "The effects of gibberellic acid and abscisic acid on alpha-amylase
RT   mRNA levels in barley aleurone layers studies using an alpha-amylase
RT   cDNA clone.";
RL   Plant Mol. Biol. 3:407-418(1984).
CC   -!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic
CC       linkages in oligosaccharides and polysaccharides.
CC   -!- COFACTOR: BINDS A CALCIUM ION REQUIRED FOR ITS ACTIVITY.
CC   -!- DEVELOPMENTAL STAGE: PRODUCTION OF ALPHA-AMYLASE IS HORMONALLY
CC       REGULATED. GERMINATING EMBRYOS PRODUCE THE HORMONE GIBBERELLIC
CC       ACID, WHICH WITHIN 10 HOURS STIMULATES THE ALEURONE CELLS COVERING
CC       THE ENDOSPERM OF THE SEED TO PRODUCE ALPHA-AMYLASE. THE ENZYME
CC       THEN DEGRADES THE STARCH WITHIN THE ENDOSPERM FOR USE BY THE
CC       DEVELOPING PLANT EMBRYO.
CC   -!- MISCELLANEOUS: THERE ARE AT LEAST 4 TYPES OF ALPHA AMYLASE IN
CC       BARLEY.
CC   -!- MISCELLANEOUS: TYPE B ISOZYME MRNA IS UNDETECTABLE IN UNSTIMULATED
CC       CELLS AND INCREASES A HUNDRED FOLD AFTER STIMULATION WITH
CC       GIBBERELLIC ACID.
CC   -!- SIMILARITY: BELONGS TO FAMILY 13 OF GLYCOSYL HYDROLASES. ALSO
CC       KNOWN AS THE ALPHA AMYLASE FAMILY.

CC   -!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic
CC       linkages in oligosaccharides and polysaccharides.
CC   -!- COFACTOR: BINDS A CALCIUM ION REQUIRED FOR ITS ACTIVITY.
CC   -!- DEVELOPMENTAL STAGE: PRODUCTION OF ALPHA-AMYLASE IS HORMONALLY
CC       REGULATED. GERMINATING EMBRYOS PRODUCE THE HORMONE GIBBERELLIC
CC       ACID, WHICH WITHIN [illegible] THE ALEURONE CELLS COVERING
CC       THE ENDOSPERM OF THE SEED TO PRODUCE ALPHA-AMYLASE. THE ENZYME
CC       THEN DEGRADES THE STARCH WITHIN THE ENDOSPERM FOR USE BY THE
CC       DEVELOPING PLANT EMBRYO.
CC   -!- INDUCTION: TYPE B ISOZYME MRNA IS UNDETECTABLE IN UNSTIMULATED
CC       CELLS AND INCREASES A HUNDRED [illegible] AFTER STIMULATION WITH
CC       GIBBERELLIC ACID.
CC   -!- MISCELLANEOUS: THERE ARE AT LEAST 4 TYPES OF ALPHA AMYLASE IN
CC       BARLEY.
CC   -!- SIMILARITY: BELONGS TO FAMILY 13 OF GLYCOSYL HYDROLASES. ALSO
CC       KNOWN AS THE ALPHA AMYLASE FAMILY.

Prod. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

CC selected cells. The complex comprises the gene encoding interferon
CC releasably linked to a conjugate of nucleic acid binding agent and a
CC ligand which binds to a component on the surface of the cell. The method
CC is used for targeted expression of recombinant IFN in selected cells, in
CC vivo or in vitro, particularly for treatment of hepatitis, several forms
CC of cancer and leukaemia and condyloma acuminatum, or for production of
CC IFN for subsequent administration as exogenous protein.

XX
CC This sequence represents the recombinant human interferon alpha-2b
CC (IFNalpha2b). A crystalline metal version of this sequence is produced
CC by the method of the invention. The method of the invention comprises
CC forming an aqueous solution of IFNalpha2 and a metal acetate salt (either
CC zinc or cobalt acetate) at a pH of from 5 to 7, where the solution has
CC an initial concentration of from 5-80 mg/ml IFNalpha2 and 70-120 mM metal
CC acetate salt. The solution is then warmed from an initial temperature of
CC about 4 degrees C to 22 degrees C, until supersaturation occurs and metal
CC IFNalpha2 crystals appear. The method is used to produce crystalline
CC IFNalpha2 which is pharmaceutically useful in controlled release

CC IFNalpha2 formulations. The [illegible] proteins have been [illegible]

PT New multifunctional proteins useful for treating angiogenic mediated
PT diseases
XX
PS Claim 5; Page 87; 121pp; English.
XX
CC The specification describes multifunctional proteins which comprise
CC combinations of angiostatin, endostatin, interferon, thrombospondin,
CC interferon-inducible protein and platelet factor 4, and have
CC anti-angiogenic and/or anti-tumor activity. The multifunctional protein
CC may exhibit useful properties such as having similar or greater
CC biological activity when compared to a single factor or by having
CC improved half-life or decreased adverse side effects, or a combination
CC of these properties. The proteins can be used for treating an
CC angiogenic-mediated disease, e.g. cancer, diabetic retinopathy, macular
CC degeneration or arthritis. They can also be used for inhibiting the
CC production of tumor cells (characterised in that breast, ovary,
CC prostate, pancreatic, gastric, colon, renal, bladder cancer, melanoma,
CC hepatoma, sarcoma and lymphoma) in a patient and for inhibiting tumor
CC growth. The present sequence represents a multifunctional protein of the
CC invention.

XX
CC Bioconjugates comprising one or more a_vb_3 antagonist moieties
CC coupled to a peptide or polypeptide having anti-angiogenic properties
CC can be used for treating a human patient with an
CC angiogenesis-mediated disease, e.g. cancer, arthritis, or macular
CC degeneration. The a_vb_3 integrin is normally associated with
CC endothelial cells but can promote the formation of blood vessels
CC (angiogenesis) in tumours. The a_vb_3 integrin is also known to
CC play a role in tumour metastasis, neoplasia, osteoporosis,
CC Paget's disease, retinopathy, arthritis, periodontal disease,
CC psoriasis and smooth muscle cell migration. Interferon alpha is a
CC family of proteins which possess complex antiviral, antineoplastic
CC and immunomodulating activities. Interferon alpha is effective
CC against a variety of cancers including hairy cell leukaemia,
CC chronic myelogenous leukaemia, malignant melanoma and Karposi's
CC sarcoma. Multi functional bioconjugates comprising both a_vb_3
CC antagonists and interferon alpha 2b can exhibit greater biological
CC activity when compared to a single factor or having improved
CC half-life or decreased adverse side effects, or a combination of
CC these properties. They can be used for inhibiting elevated levels
CC of tumor antigens, inhibiting the proliferation of tumor cells and
CC inhibiting tumor growth. The bioconjugates can also be used for
CC treating e.g. osteoporosis, humoral hypercalcemia of malignancy,
CC Paget's disease, retinopathy including diabetic retinopathy,
CC arthritis, including rheumatoid arthritis, periodontal disease,
CC psoriasis, thrombosis, angina, atherosclerosis, smooth muscle cell
CC migration and restenosis in a mammal. They are also useful as
CC antiviral, antifungal and antibacterial agents.

PT   Targeted delivery of nucleic acids encoding interferons to the liver
PT   for the treatment of hepatitis infections -
XX
PS   Example 3; Column 23-26; 28pp; English.
XX
CC   The present sequence corresponds to a mutant human mature
CC   interferon alpha2b (IFN-alpha2b) in which residue Arg-121 of the
CC   wild-type sequence (see AAM50693) is replaced by Arg, and wild-type
CC   Gln-125 is replaced by Arg, the residues found in the corresponding
CC   positions of IFN-alpha1. The mutations were introduced into
CC   IFN-alpha2b DNA by site-directed mutagenesis. The virucide
CC   activity of the full-length mutant protein expressed in mouse cells
CC   (taking the activity of the wild-type protein as 1) was 3000, with
CC   an enhancement factor of 3000. The invention provides a method for
CC   the targeted delivery of nucleic acids encoding interferons,
CC   especially human IFN-alpha2b, to the liver for the treatment of
CC   hepatitis infections.

RT   I interferons.";
RL   DNA 5:345-356(1986).
CC   -!- FUNCTION: PRODUCED BY MACROPHAGES, IFN-ALPHA HAVE ANTIVIRAL
CC       ACTIVITIES. INTERFERON STIMULATES THE PRODUCTION OF TWO ENZYMES:
CC       A PROTEIN KINASE AND AN OLIGOADENYLATE SYNTHETASE.
CC   -!- SUBCELLULAR LOCATION: Secreted.
CC   -!- SIMILARITY: BELONGS TO THE INTERFERON ALPHA, BETA AND DELTA
CC       FAMILY.
